Quick launch checklist...

	Bring up the launch instance dialogue:
☐	In a web browser navigate to the Dashboard home (https://dashboard.rc.nectar.org.au) and log in.
☐	Select the "**Instances**" menu item (https://dashboard.rc.nectar.org.au/project/instances/)
☐	Press the "**Launch Instance**" button
☐	A dialogue titled "**Launch Instance**" is shown

In the **Launch Instances** dialogue:

	Go to the "Details" tab:
☐	Enter a meaningful name in the Instance Name field, e.g.: "**TestInstance**"
☐	The selected Flavor is **m2 tiny**
☐	The selected Instance Count is **1**
☐	The Instance Boot Source is **Boot from image**
☐	The Image Name is **res_os_drupal7**
	Go to the "Access & Security" tab:
☐	The **http** security group is checked
	Launch the instance:
☐	Press the "**Launch**" button...

Wait for the instance to launch…

	Once launched (Status is Active in the column named Status)
☐	The IP address for the instance in the **IP Address** column is:

Now Build a url to place in your browser by prepending "http://" to the IP address

	URL works:
☐	When visiting the constructed URL (along the lines of "http://144.6.255.198") a web page opens in your browser, and shows a photograph of the Research Kat.

Congratulations! You have just launched a free content management system in the NeCTAR cloud.
